

Red Owl Software

SELECTED WORK • AGENTIC SOFTWARE STUDIO

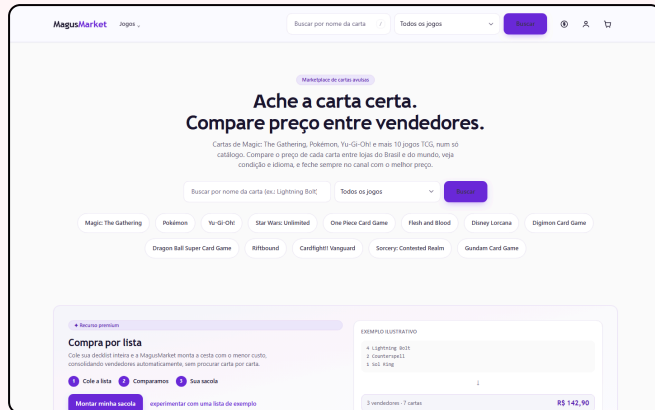

Production software, shipped by a governed fleet of **AI agents**.

Three examples, built and run end to end: a trading-card marketplace platform, a KYC anti-fraud product and a US real-estate data product. Direction, architecture and acceptance criteria by a human; every line implemented by agents.

Magus platform - a full Magento re-platform, **zero code written by hand**

A live trading-card marketplace: an entire legacy Magento platform (1.4M lines of module code) rebuilt on a modern stack, piece by piece, while the store kept selling. Every line implemented by AI agents; direction, architecture and acceptance criteria by a human.

ONE CATALOG, 13 CARD GAMES - SEARCH, COMPARE SELLERS, BUY BY DECKLIST

REAL SEARCH OVER 2.4M DOCUMENTS: 1,309 RESULTS WITH CONDITION, FINISH AND LIVE PRICES

CATALOG ITEMS RECONCILED FROM MULTIPLE
SOURCES

2,200+

AUTOMATED TESTS GREEN ON A TYPICAL DAY

1 / 48k

ERRORS FOUND WHEN 48,062 ITEMS WERE AUDITED

Why the data can be trusted: records from different sources are matched by exact rules only - the system is forbidden to guess. When two sources disagree, the record is set aside for review instead of being written as fact. The catalog was then audited item by item, 48,062 of them, against the original sources: exactly one real error was found.

ProoVoo - identity verification, **from the idea to live**

Conceived, validated with real paid traffic (fake-door, two anchor audiences), built and launched end to end: web, iOS and Android apps, OTP + KYC provider integration, and a fully automated marketing engine - ads to signup with zero human touch.

PROOV00.COM - LIVE PRODUCT: PASTE A SUSPICIOUS MESSAGE, GET AN INSTANT SCAM CHECK, FREE

FOUR PROTECTION MODES: SCAM CHECK, VERIFIED IDENTITY PAGE, COUNTERPART VERIFICATION, AUDIO/VIDEO ANALYSIS

Primeira Terça - fragmented public records, one decision-ready page

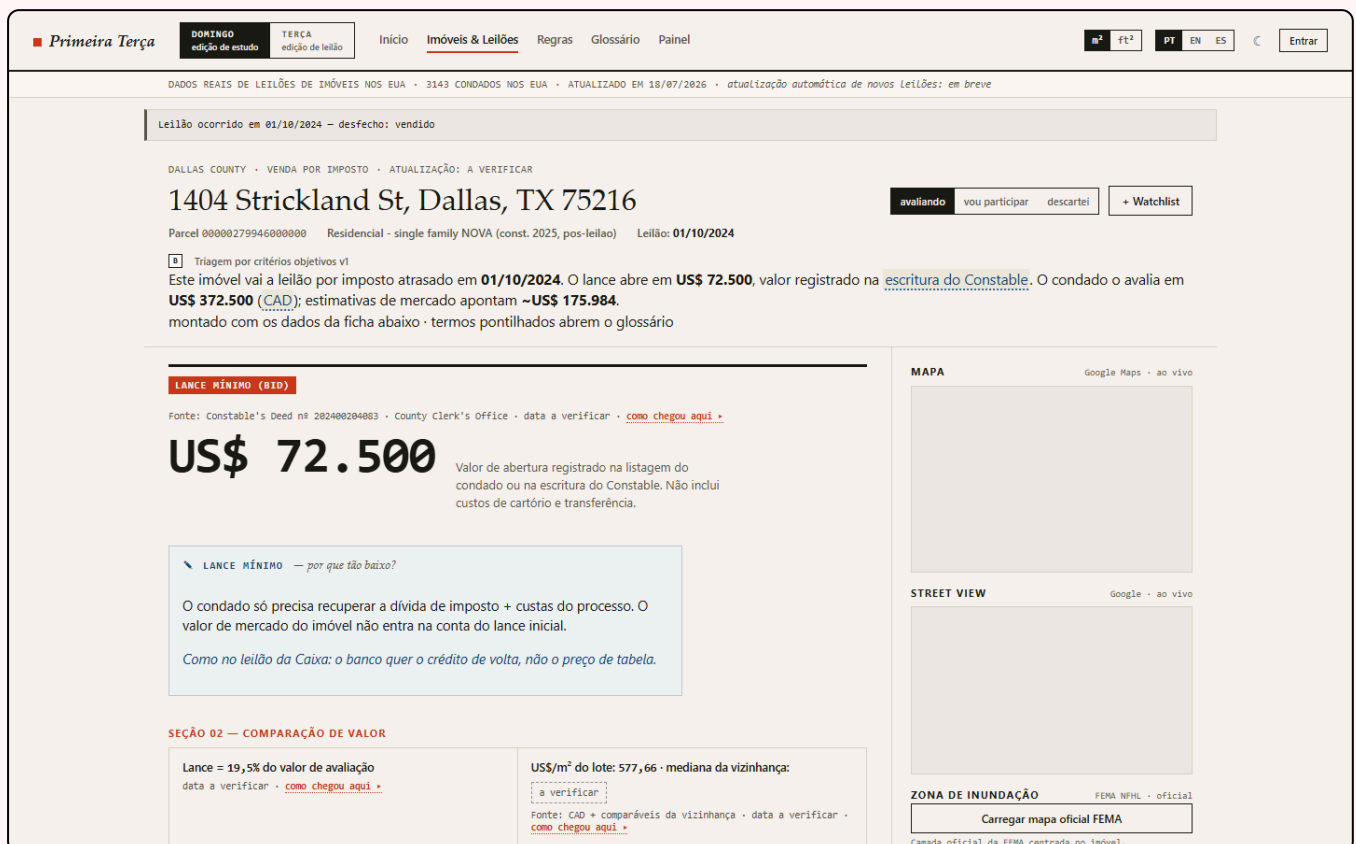

3,143 US counties mapped, 51 jurisdictions catalogued, 1,271 property pages live across two states. Six-step due diligence on a single page - every data point with source and date, bids audited to the cent, deeds read by multimodal AI.

NEWSPAPER-INSPIRED EDITION WITH LIVE AUCTION STATS

INTERACTIVE STATE MAP + SEARCHABLE LISTINGS

A PROPERTY PAGE: OPENING BID, VALUE COMPARISON, RISK, DEED - EACH WITH SOURCE AND VERIFICATION DATE

Why this page matters: it condenses hours of research across county, market and map websites into one screen a buyer can act on. Every number carries its source and the date it was last checked - hovering any data point shows its full verification history. Pages are sampled and re-checked through independent official channels: auction bids matched the county records to the cent, with zero divergences found. And where Texas law hides the real sale price, the registered deed itself is read by AI to surface it.

Agents do the work. The judgment stays human.

Every project ships under the same written rulebook the fleet actually runs on:

RULE 01 - HUMAN HARD LINES

Money, access, personal data

No agent moves money, touches credentials or deletes personal data. Those calls are made by a person, on the record.

RULE 02 - ADVERSARIAL GATES

Refute before merge

An independent agent tries to tear the work apart before it ships. Nothing merges without a green verdict.

RULE 03 - BLIND CONTROLS

Traps in every audit

Test cases are planted where the auditing AI can't recognize them - if it starts making things up, the traps catch it before anything reaches your results.

RULE 04 - DECISIONS ON RECORD

Decisions in writing, not vibes

Architecture decisions are written and versioned. Nothing gets silently re-decided.
